Outdoor Bench #2

Mahogany and Cast Concrete 33"H x 120"W x 26"D

The concrete legs are cast to include a support for the back of this 10' Mahogany modern outdoor bench. The legs are a prominent feature and they lean and angle to evoke a delicate feel from a material that is known for its strength and weight. The woodwork of the seat and the back shift and facet in my style to accentuate the tension created by the leaning legs. The bench is original, a reflection of all I know, and it is clearly a captured moment in time. I could build another Outdoor Bench #2 and it would only be similar to this one because it would capture a different adventure.
